

EUROSYSTEM V8

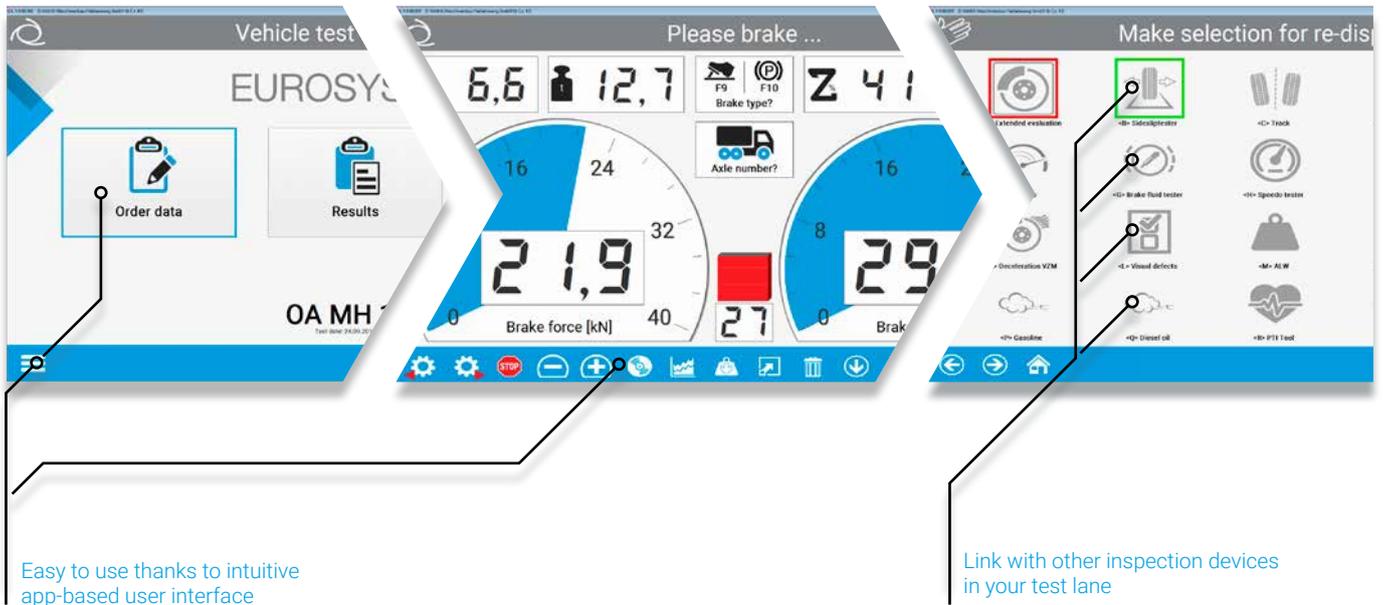

THE BEST SOFTWARE SOLUTION
FOR VEHICLE INSPECTION
WORKFLOWS. WORLDWIDE.

made by MAHA
made
in
Germany

REDUCED TO THE ESSENTIALS

Thanks to the intuitive user interface, users can find their feet quickly and work efficiently. The visualisation is based on the principle of big, subtle and straightforward.

Easy to use thanks to intuitive app-based user interface

Link with other inspection devices in your test lane

Machine data statistics

Usage data Brake tester				
Model	Serial number	Initial operation	Maintenance term	
TYP IN7 EURO	339455-004	14.07.2018	25.10.2019	
Operating times				
Tester occupied count		Runtime of drives		
17		0h 30m		
Usage data Side/air tester				
Model	Serial number	Initial operation	Maintenance term	
TYP MIND B	123767-001	11.07.2018	25.04.2020	
Operating times				
Tester occupied count		Runtime of drives		
0		0h 00m		
Usage data Axle damping tester				
Model	Serial number	Initial operation	Maintenance term	
TYP M503000	360320-001	13.07.2018	29.07.2019	
Operating times

Information on use and maintenance of inspection devices

Guidance – made by MAHA

Stay legally compliant. Our homologated V8 offers you a large number of vehicle inspection workflows for the PTI worldwide. Allow yourself to be guided through the inspection workflow in the most efficient way.

Connections – made by MAHA

Stay connected. Connect your MAHA inspection devices with our V8. Reduce complexity in operation, workflow and data processing. A software solution for almost everything.

Individuality – made by MAHA

Stay smart. Our V8 is intuitive in operation, with rapid and efficient display. Use state-of-the-art displays, in dial or pie chart form, reduced to the essentials with all relevant information.

Mobility – made by MAHA

Stay where you are. Our V8 allows you to use mobile solutions, e.g. even on the tablet, inside the vehicle and to display information on multiple workstations in a test lane. Perfectly configured to meet your needs.

Reporting – made by MAHA

Stay in the know. Our test reports provide all the required information, fast, precise and straightforward. Talk to your customers and show them where action is needed – in 39 languages, for 44 countries.

EXCELLENT DEPICTION AND EVALUATION OF ALL RELEVANT MEASUREMENT VALUES

The screenshot shows the MAHA V8 software interface with several callouts:

- Display of brake pressure, initiation/deactivation pressure (automatic and manual workflow):** Points to the top-left digital display showing '6,6'.
- Selection of brake type and axle to be measured:** Points to the top-center dropdown menu showing '1'.
- Depiction of minimum deceleration:** Points to the top-right digital display showing '6,0'.
- Operator guidance:** Points to the top-right corner of the interface.
- Tonnage of a particular axle:** Points to the left gauge's needle and the '18,0' digital display.
- Slippage warning signal:** Points to the 'STOP' icon in the bottom control bar.
- Depiction of braking force – with automatic measurement range expansion – as pie chart:** Points to the left gauge's blue pie chart.
- Depiction of braking force difference (bar chart):** Points to the '22' digital display between the gauges.
- Depiction of braking force – with automatic measurement range expansion – as dial chart:** Points to the right gauge's needle and the '23,1' digital display.
- Control bar with advanced functions:** Points to the bottom bar containing various icons like 'STOP', '+', and 'H'.

Information – made by MAHA

Stay ahead. Our V8 enables efficient data processing for vehicles, measurement results and customer data – with a licence-free SQL database. Stay in control of your data and know your customers – and not the other way round.

Optimisation – made by MAHA

Stay busy. Our V8 gives you all the data on your devices and your usage behaviour. Analyse better and make time for maintenance early on – before it's too late. Use your devices to the full: our machine data can help you to optimise downtime and waiting periods. Your customers will thank you.

Flexibility – made by MAHA

Stay open. Our V8 offers you a large number of interfaces for communicating with other systems (ASA Livestream, Bluetooth, WIFI, XML, RS232, ES_In/Out and more)

Safety – made by MAHA

Have trust. By using remote maintenance, we make sure that our service technicians are holding the right diagnosis with the right solution ready to hand for you. This guarantees maximum service time of your equipment and minimises downtime.

The test report

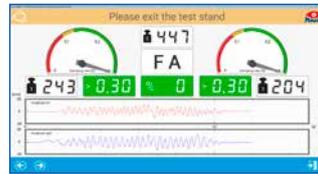

Your company name here		Your street here		Your telephone here		Your location here	
Customer and vehicle data							
Name/Id:	License pl. no.: 01-ABJ/047			VIN			
Street:	Manufacturer:			Model:

364 %	221 %	1018 kg	Fail				

Structured and easy to understand

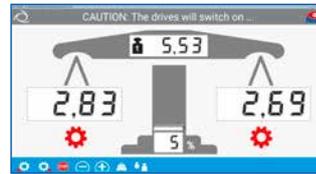

SOFTWAREMODULE

Side-slip test

Axle damping

Axle load weighing mode

Data collection

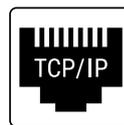

Basic software modules

- Tablet control via remote control (W-LAN)
- Visual inspection
- Extensive diagnostics menu for hotline, service centre, commissioning, etc.
- Effortless activation of software and options via activation code
- 30-day test version with all available options
- User management (with assignment of various rights)
- Visualisation of load simulation (roller set lift or pull-down method)
- Individual limit management for connected inspection devices, for expert requirements
- Dynamic and static weight measurement
- Visualisation of determination of the friction coefficient
- Determination and visualisation of the ovality
- Pedal force transfer via radio
- Radio and infrared remote control
- Brake balancing for trailer
- Pressure and leakage test for pneumatic braking systems of utility vehicles
- Optional incorporation of tachograph test

Additional software modules

- Brake evaluation (safety inspection and extrapolation)
- Multi-station capacity (expand test lane into sectional test bay)
- MCTC Net2
- Hysteresis graph
- OTC-LAN
- Noise detection (MSD)
- Agricultural vehicles (Switzerland)
- Time measurement GOST
- MLT 3000 (light test) integration via Bluetooth
- Encryption of ES_OUT interface
- Automated licence plate recognition
- Blockage warning (directly before slippage)
- RFID for non-contact identification of the inspector (using passive transponders)
- Recording of vehicle via IP camera
- Connection of external noise level meter
- Machine data statistics (incl. test report printout)
- Biometric authentication by means of fingerprint scanner

Available interfaces (APIs)

- ES_IN / ES_OUT (ASCII)
- MCTC Net2
- GIEG-Lan
- OTC-Lan
